Milestones JSON Specification

```
{  
  "short": "milestn"  
  "name": "Milestone Name"  
  "description": "Short description."  
  "count": 0  
  "goals": [1]  
}
```

short:

Shortened version of the milestone's name used to identify a given milestone and find it in the database.

name:

The milestone's proper name, which will be seen by users.

description:

A short description detailing milestone goal criteria.

count:

The amount of instances tracked by the milestone.

goals:

An array of integers. Each integer represents the goal for a "stage" of the milestone.
